

Vinyl Installation and Removal

Thank you for choosing Wall Shotz! To make the most of your Wall Shot, we recommend following these installation and removal guidelines. If you have questions, please call us at 603-431-0900. We're available from 9 a.m. to 5 p.m., Eastern Time, Monday through Friday, excluding holidays.

Note: Your vinyl Wall Shot consists of three layers: the top layer is the application tape, the middle is the printed material (your photo), and the bottom is the backing paper.

Installation Guidelines

Before application, unroll the decal and allow it to lay flat. This will make the vinyl easier to handle. You will need a vinyl applicator (supplied), masking tape, scissors, tape measure or level.

1. Start with a clean surface that is preferably out of the direct sun (posting your vinyl in a location that is between 55°F and 70°F is ideal).
2. Before removing the liner, test the decal on desired location. Use small tabs of tape along top edge to hold it in place. [pic A] Check to make sure the decal is centered and level, as desired.
3. Run a strip of tape down the middle, right on top of the decal. [pic B]
4. Starting on one side, pull back the decal with the application tape (the transparent top layer) and cut off **only** the backing liner (shiny paper). [pic C]
5. Holding on to the decal, place it close to the desired location and use the vinyl applicator to adhere the decal to the surface using a back-and-forth overlapping motion. (Firmer pressure is needed on more textured surfaces.) [pic D]
6. Remove the tape running down the middle of the decal.
7. Remove the backing paper on other side of decal. Again, hold on to the decal and use the vinyl applicator to install. [pic E]
8. Slowly, pull back the top application sheet at a sharp, 180-degree angle (rather than 90 degrees straight up). [pic F] Any bubbles can be removed with a pin. [finished decal = pic G]

Removal Guidelines

When you're ready to remove your sticker, use a hair dryer or heat gun to heat the decal. Then, gently peel it off the surface.

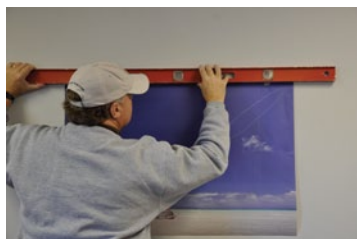

Photo Tex™ Wall Sticker Installation and Removal

1. Unroll the sticker and allow it to lay flat before installation.
2. Consider using tape to hold the sticker up where you will be installing it to check that it is centered and level, as desired. [pic #1] Once in position, make some small marks with pencil or removable material, such as tape. [pic #2]
3. Place your Photo Tex print face down on a smooth surface. Gently pull back the backing paper across one edge. Fold the paper back and crease it, so you have a strip of adhesive showing. [pic #3]
4. Stick this edge to the wall, lining the sticker up with the marks you made. [pic #4] Remove the backing paper and apply the sticker to the surface using your hands or a squeegee to smooth out this flexible and forgiving material. [pic #5] Any wrinkles smooth out easily with your hand.

You may want to save the liner if you later plan to move the sticker a great distance. (Wax paper may work in a pinch.)

To remove, gently peel the sticker off. You can reposition it many, many times!
